

AAAA CONVENTION ISSUE

Army Aviation

OCTOBER 13, 1976

**When the
target's coming up,
depend on Bell
to put the pilot in
complete control.**

**Bell Helicopter.
The company with
gunship experience.**

Put yourself

On the battlefield, availability, performance and survivability count for everything. That is where the YAH-64 Advanced Attack Helicopter excels. And it's built for the men who will have to live with it.

A. Built For The Pilot—Outstanding visibility. Near the center of gravity for best "feel" in nap-of-the-earth flying. The proven four-blade quiet main rotor and fail-safe stationary mast provide maximum agility, safety, negative-G control. Top forward speed, 204 knots. Sideward and rearward speed, 45 knots. Vertical rate of climb, twice the Army's requirement. Low canopy glare, quiet tail rotor and small radar and IR cross sections make the YAH-64 most difficult to

locate. Survivability: up to 23mm hits absorbed with only localized damage. Redundant systems to prevent loss of control.

B. Built For The Copilot-Gunner—Unobstructed front seat location for best visual target spotting. In front of weapons firing effects to avoid interference with IR target acquisition. Flight controls identical to the pilot's for safety, survivability, ease of training and interchangeability. Fully integrated weapon systems deliver a deadly barrage of Hellfire missiles, 2.75-inch rockets and 30mm fire under all operating conditions.

Pilot and copilot compartments enclosed with protective armor. Crew crash survivability at

Hughes YAH-64.

in their place.

impacts in excess of 30 mph.

C. Built For The Ordnance Crew—Easy access to all weapon systems. Interchangeable wing pylons accept rocket launchers, missile launchers, extended range fuel tanks. Prebore-sighted launchers loaded or unloaded in minutes. The Hughes XM230 Chain Gun, a small, lightweight, easily maintained, reliable cannon, is designed specifically for the AAH mission. It can be loaded to full capacity by two men in just 12 minutes—or to normal mission complement in only four minutes—without use of ground support equipment.

D. Built For The Maintenance Crew—Maintenance hours per flight hour have been

reduced 38% from Army requirements. Only standard tools required. Easy access to all dynamic components. Inspection and maintenance require no ground workstands. Upper deck access panels and engine nacelles serve as maintenance/inspection platforms. Easy maintenance features include two-man blade installation and removal; lubrication-free rotor system; grease-filled intermediate and tail rotor gear boxes; 20-minute engine change; slide-in/slide-out main rotor transmission without removing rotor hub or controls.

Designed to Cost—The YAH-64 will be produced within Army cost objectives.

Hughes Helicopters

A Division of Summa Corporation

Built for the men who have to live with it.

The VG-204 Vertical Gyro/ Accelerometer.

For multiple mission application.

Now you can have pitch and roll stabilized accelerometers for sensing vertical, lateral, and longitudinal accelerations. The unique J.E.T. Vertical Gyro design with integrally mounted accelerometers have been proven in flight to satisfy critical design and operational problems. This proven gyro design also features true lateral acceleration cutout to eliminate turn errors; thus eliminating a rate switching gyro.

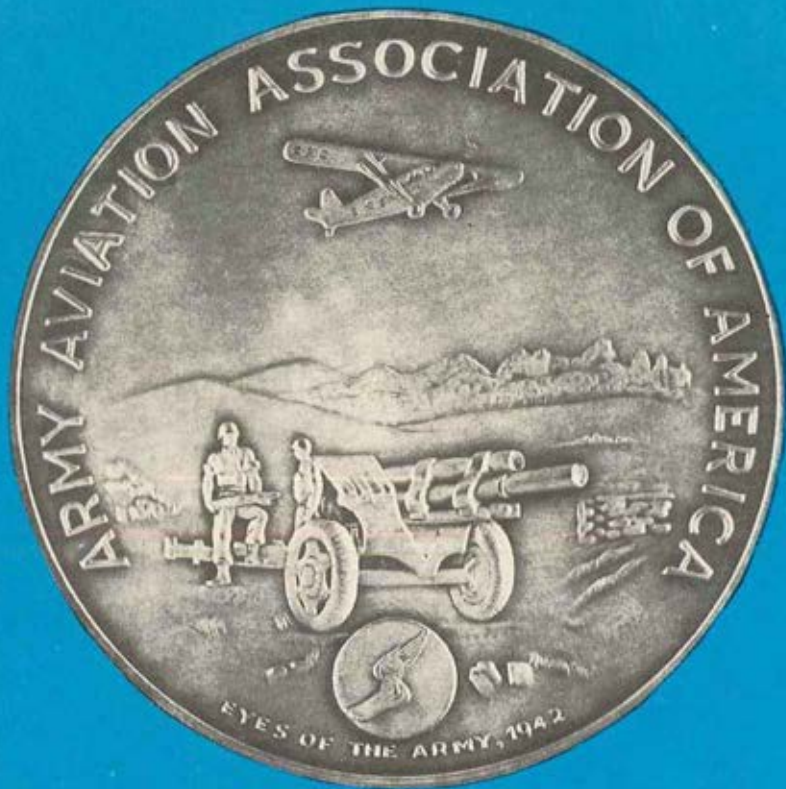

If your programs involve guidance and stabilization for targets, drones, RPVs, helicopter

hover, shipboard tethering, in-flight analysis of airframe stresses or flight path angles, J.E.T.'s VG-204 Vertical Gyro/Accelerometer is just what you've been looking for. It performs to MIL-A-22858, Amendment 5, MIL-G-23081C, MIL-G-25597D, or MIL-G-81620A. You'll like the price, too.

To integrate the VG-204 Vertical Gyro/Accelerometer into your program just contact: Jet Electronics & Technology, Inc., Military Marketing Department, 5353 52nd St. Grand Rapids, MI 49508. Ph: (616) 949-6600.

The Officers and Vice Presidents of AAAA are elected for three-year terms at the National Convention. The Executive Vice President serves as a five-year National Board appointee. National Members-at-Large are appointed by the President for one-year terms. The Regional Presidents are elected within the Region for two-year terms. Chapter Presidents † are those representing CONUS Chapters with 150 or more members.

*Deceased

Welcome to AAAA!

During Wednesday morning, 13 October and the subsequent Friday afternoon, Army Aviation Ass'n members, Chapter Officers and Delegates, industry members, and distinguished military leaders and their wives will gather in Washington on the occasion of AAAA's 20th Anniversary.

To those present, I say "Welcome!" and I look forward to meeting each of you during the three-day program ahead.

To those who cannot be present, I extend my personal greetings and best wishes on this eighteenth national Quad-A assembly.

This issue highlights the convention's activities and personalities, and is called appropriately: "The Convention Issue and Program." Virtually everything of importance in AAAA — its purposes, programs, activity structure, government, and the like — are covered in this issue, one that should serve as an excellent "Why belong?" document for briefing non-members.

As in past years, the professional program - arranged this year by General "Charlie" Canedy - is top-drawer and most informative.

On the social side of the house, Art Kesten and his all-volunteer crew have worked long and hard — the end product being social functions at which all of our aviation people and their wives - newcomers and oldsters — military and industry — are certain to enjoy themselves immensely. (I admit to some apprehension about the 'Presidential Roast' which I hear has slipped from its already low "PG" rating.)

We're sorry that all of you did not get to "the National" this year. As the promotional pieces have said, "There'll never be another like it."

JOHN M. WRIGHT, JR.
LTG, USA (Ret.)
President, AAAA

AAAA'S OBJECTIVES, PURPOSES AND SPECIFIC PROGRAMS

COL Adamson

The Army Aviation Association of America [AAAA] was formed in early 1957 by a small group of senior aviation officers in the active Army, the Reserve Forces of the U.S. Army, and industry. Following the incorporation of the AAAA as a membership corporation without capital stock under the laws of the State of Connecticut, this group took over control of the affairs of the AAAA from the incorporators on April 18, 1957.

Modeled after several of the professional-technical societies in existence, the AAAA grew rapidly, receiving membership support of the majority of those military and civilian persons having an interest in this segment of the Armed Forces.

GENERAL PURPOSES

To advance the status, overall esprit, and the general knowledge and efficiency of those persons who are professionally engaged anywhere in the overall field of U.S. Army Aviation, including: the Active Army, the Reserve components; the aerospace industry; the various activities in the Department of the Army which support Army Aviation, such as the Army development, supply and maintenance agencies; and all other activities, civilian or military, contributing to the furtherance of Army Aviation.

To preserve and foster a spirit of good fellowship among military and civilian persons whose past or current duties affiliate them with the field of U.S. Army Aviation.

E.J. Tallia

SPECIFIC OBJECTIVES

Fostering a public understanding of Army Aviation and arousing a public interest in this segment of the military forces.

Exchanging ideas and disseminating information pertinent to Army Aviation through the media endorsed by the Association.

Stimulating good fellowship nationally, regionally, and locally.

Inspiring Army-wide and nationwide interest in Army Aviation careers.

Cementing relationships between those interested in Army Aviation in the active U.S. Army forces and the Reserve Forces of the U.S. Army.

Motivating Army Aviation personnel to increase their knowledge, techniques, and skills.

Maintaining historical records of Army Aviation.

Conducting meetings, seminars, symposiums, exhibitions, air meets, etc.

Recognizing outstanding contributions within Army Aviation.

Providing special types of group plans of individual benefit to the membership.

MG Lee

SPECIFIC PROGRAMS

An AWARDS PROGRAM in which outstanding individual and unit achievements receive National recognition.

A CHAPTER ACTIVITIES PROGRAM in which outstanding industry and military leaders address the widespread Chapter organizations on specific areas of Army aviation interest.

A LOCATOR SERVICE PROGRAM in which the member is assisted in his efforts to keep abreast of the location of his contemporaries.

A SCHOLARSHIP AWARDS PROGRAM in which the sons and daughters of members receive scholarship assistance annually is pursued in conjunction with the AAAA Scholarship Foundation, Inc., a separate, non-profit educational foundation that works closely with the AAAA. These are but a few of AAAA's "specific" programs.

CW4 Cook

T700 Reliability

Here's One of the Reasons Behind Unprecedented Engine Reliability for UTTAS and AAH

The T700 advanced technology combustor. When the Army established its UTTAS and AAH engine reliability goals, the combustor became a prime area for attention, because current operational engines are limited primarily by "hot section" life. New combustors or major repairs are needed after only a few hundred hours of operation.

The T700 goal? A combustor that will last 5000 hours. We're well on our way to achieving it. With more than 25,000 total engine hours experience, all combustors in the program remain

operational. Several have already exceeded 1000 hours of operation. Not one has had to be repaired or scrapped.

Its reliability is a key reason why 75% less maintenance manhours will be required on the T700 when compared with current operational engines.

For UTTAS and AAH, the T700 offers the first real long-life combustor in helicopter engines.

205-158

The T700. The engine for the Army of the 80's.

MG Maddox

COL Crouch

OUTGOING NAT'L BOARD OFFICERS TO BE HONORED AT OCTOBER 14 LUNCHEON

LTG Wright

BG Hemingway

□ MG WILLIAM J. MADDOX, JR. has 'paid his [AAAA] dues,' having been Chairman of the Presentations Subcommittee at five AAAA Nat'l Conventions. He activated the First Region, the Assn's largest, and held highly successful Regional Conventions at Atlanta ['75] and Williamsburg ['76]. He's also been an Awards Committee member and a National Member-at-Large.

□ COL WILLIAM E. CROUCH, JR. is another "two-hatter" in representing the Washington, D.C. Chapter's 556 members as its President. An AAAA enthusiast, he's served on the Ass'n Awards Committee and has been the Moderator at many 'Hardware Panels' held at National and Regional AAAA Conventions.

□ COL RUDOLPH D. DESCOTEAU has contributed to AAAA in various roles. A member of its Awards, Fiscal and Hall of Fame Committees, he's chaired the latter for the past two years. Currently a National Member-at-Large on AAAA's Board, he's also chaired several luncheons at recent AAAA Nat'l Conventions.

□ PAUL L. HENDRICKSON has been active in Quad-A at all organizational levels. He's a Past President of the Lindbergh Chapter, and is a current V.P. on the Fifth Region Executive Board and a Nat'l Member-at-Large on the Nat'l Board. A Charter "Lifer," he's played a main role in the conduct of AAAA-sponsored APBI's and recent 'Product Support Symposiums.'

COL Descoteau

P.L. Hendrickson

□ LTG JOHN M. WRIGHT, JR., a longtime proponent of Army Aviation, is Director of Program at the Boy Scouts of America's national hqs in N. Brunswick, N.J. Prior to retiring he'd served as CG of the Infantry Center and as Comptroller of the Army. Active in Quad-A since 1965, he's made many presentations at Regional and Chapter meetings, and is a Charter Life Member.

□ BG JACK W. HEMINGWAY, a former Director of Army Aviation and 1st Aviation Brigade Commander, serves as a municipal judge in Killeen, Tex. He's served AAAA as Awards Committee Vice Chairman; Convention Committee Protocol Chairman; and as a National Member-at-Large for two successive terms.

□ DONALD F. LUCE has been instrumental in activating Chapters at Corpus Christi, Ft. Worth, Amarillo, and St. Louis, and as current Lindbergh Chapter president 'wears two Board hats.' He's been the force behind the "Product Support Symposiums" sponsored by his Chapter, and earlier APBI's in Washington. He also served as a National Member-at-Large for four years.

□ CARL D. PERRY, Hughes Helicopters' V.P. for Marketing, was instrumental in establishing AAAA's Southern California Chapter and has served as AAAA's V.P. for Industry Affairs. A constant traveler, he's addressed Army Aviation and AAAA groups worldwide, and has served on the nat'l convention staff.

D.F. Luce

C.D. Perry

'MORE'

HAWK

for tomorrow's Army! . . . The growth of technology and a highly sophisticated battlefield place ever-increasing importance on the U. S. Army's surveillance mission.

Over the next decade, the demand for airborne surveillance will be vastly increased while operating inventories will be reduced. Grumman is responding. Not more Mohawks but **MORE MOHAWK**. The versatile "Hawk", currently being modernized to the OV-10 configuration, will soon take on even newer tasks.

"MORE" MOHAWK . . . the cost-conscious answer to a searching problem.

THIS POPULAR CORPORATE JETPROP IS AT HOME IN THE ARMY.

The Army C-12A utility transport first gained its world-wide reputation for capability as a corporate jetprop, the Beechcraft Super King Air.

A reputation gained for a number of solid reasons that make it particularly well-suited for its new role in Army aviation.

Because the Army, like industry, needs to move people and cargo swiftly, economically and dependably. And more often than not, the Army needs on-demand transportation that commercial carriers do not deliver, plus small-field capabilities that many other aircraft cannot provide.

This fine transport comfortably accommodates eight passengers and two pilots, and it provides a lavatory plus adequate space for baggage. It has a useful load of 4,425 lbs. Cruise speed is more than 228 knots and maximum range with full load is more than 1,200 miles. Cabin pressurization allows over-the-weather operation to 30,000 ft. without oxygen.

With these performance capabilities, the C-12A gives the Army an economical alternative to other aircraft in its utility fleet. Because operating and maintenance costs are significantly lower than most other available personnel and cargo carriers.

Even though the C-12A begins its Army service as a utility transport, its versatility, performance and economy suggest several other mission possibilities: aerial surveillance, photography, tactical field support, proficiency flying for desk-bound pilots, courier

service, shuttle air-service over heavy traffic routes, to name a few. There are many more.

In addition, Beech's new C-12A program introduces a first for the Army. All C-12A's under current order have full contractor support on a world-wide arrangement, wherever these airplanes are stationed. Through full Beech logistic support, these airplanes are exceeding the contractual requirement for 80% operational readiness.

The versatile, economical C-12A. It's right at home in the Army.

ASK FOR OUR C-12A INFORMATION KIT.

Perhaps your organization has a mission requirement that this hustling jetprop can fulfill. We'd like to show you how it can.

For your information kit, write or call E.C. Nikkel, Vice President-Aerospace Program, Beech Aircraft Corporation, Wichita, Kansas 67201. Phone: (316) 689-8175.

EXPANSION — In its first two years, the AAAA Nat'l Board totaled 11. In '59, 3 to 5 Regional Presidents were added. In 1962, Nat'l Members-at-Large were approved, going from one in '62 to nine today. The Board's Past President retained a Board seal, being joined by 18 to 22 Chapter Presidents with 150+ members. Total. A Board of 48 to 52 members.

**Now another go-anywhere transport
from de Havilland joins the U.S. Army...**

the UV-18A Twin Otter.

The U.S. forces had already chosen the Beaver, the Otter and the Caribou—more than 1,300 go-anywhere planes from de Havilland. They knew our performance first hand. And they had a very demanding order to fill, selecting transports for "command administrative, logistical and personnel flights from battalion headquarters to remote village sites throughout western and northern Alaska on a year-round basis."

It's no wonder they chose the Twin Otter. With their de Havilland experience. Plus these Twin Otter features:

It converts readily from wheels to wheel-skis, floats or high-flotation tires. (The U.S. is equipping each Twin Otter with all of these.)

It carries 19 troops in and out of rough, makeshift 300 m (1,000 ft) strips with room to spare.

In 15 minutes, two men can change

it to a cargo plane that will carry a payload of more than two tons.

On a hundred-mile-radius reconnaissance or search and rescue mission, it can stay aloft for more than 6 hours because of its exceptional fuel economy.

It cruises at 182 knots at 10,000 feet. Or handles easily at 70 knots for pin-point parachropping of men or supplies.

The de Havilland Twin Otter. The go-anywhere plane that has proved its dependability, versatility and economy with 18 other defence, police and government organizations. And with 135 civil operators.

The de Havilland Aircraft of Canada Limited, Downsview, Ontario, M3K 1Y5.

**Twin Otter: the standard of dependability
and versatility in more than 50 countries.**

BOEING VERTOL

SIKORSKY

UTTAS

AAH

BELL

HUGHES

Here's why a Solar APU flies with everybody in the UTTAS and AAH competitions.

The advanced T-40 *Titan*® gas turbine auxiliary power unit offers even better performance and reliability and longer life than the thousands of Solar APU's that went before it.

That's why all four finalists in the UTTAS and AAH flyoffs chose Solar for main engine starting and auxiliary electric and hydraulic power.

The T-40 *Titan* engine APU has an extra margin of bleed air for engine starting and to handle sand, dust or salt water spray better.

This APU delivers 90 shaft horsepower or 72 pounds/minute of bleed air and weighs only 88 lbs.

Proven under the most rugged combat conditions, *Titan* turbine APU's are in use on every major military helicopter that has an APU. And one has been chosen for the F-16's self-sufficient starter system.

Altogether, Solar has designed and built more than 6,600 gas turbine APU's which have logged over 8 million operating hours.

Get complete details on the APU everybody in the UTTAS and AAH finals has his money on.

Write Solar, Division of International Harvester, Dept. Y-401, San Diego, CA 92138.

BOEING'S UTTAS - FOR THE 1980'S AND BEYOND

***ADVANCED TECHNOLOGY
MAKES THE DIFFERENCE
IN SIZE:***

In Nap-of-Earth, where every foot counts,
the Boeing UTTAS is four feet smaller.

Hingeless fiberglass rotor / advanced airfoils

- Smaller rotor diameter
- Less vulnerability
- Lighter weight
- Better concealment

Compact drive system / advanced gear alloys

- Lower profile
- Better air transportability

Kneeling tricycle gear

- Wider and longer cabin—more floor area
- Faster troop ingress and egress
- Better ground handling
- Easier access for maintenance

Bigger inside—smaller outside

*Technology leadership establishing
a new state of the art in performance,
flying qualities, survivability, reliability,
maintainability, and availability—at lower
than design-to-cost targets!*

UTTAS Hoist...

Ready and Built by BREEZE

You would expect Breeze — with unequalled experience in airborne hoist design — to have an efficient, adaptable system both tested and ready for the UTTAS program.

And we do. Carried out and funded by BREEZE.

Sized for growth of high performance requirements . . . light . . . retractable . . . unique — the hoist has been checked in aircraft for compatibility of size and operation.

It is ready when UTTAS is.

Secretary: CWO (W3) Archie L. Pitts
98 members — Last Meeting: 25 June 1976

NEW **SAFE HOT REFUELLING NOZZLE FOR HELICOPTERS**

An important **NEW** advance from
EMCO WHEATON

Emco Wheaton, acknowledged the world over for fluid handling equipment and systems, discloses a new nozzle for ground refuelling of helicopters with engine running and rotors turning.

This important new development ensures positive and reliable automatic fuel shut-off when the spout is withdrawn from the tank filler neck. A fuel level sensor operates at true fuel level, froth being dissipated by an anti-froth device.

An automatic fuel shut off facility operates at all flow rates from maximum down to 5 U.S. GPM. A manual over-ride to the auto shut-off mechanism enables intermittent flow for topping-up to absolute tank capacity.

The new nozzle, designated G457 may also be used for general purpose open-fill refuelling of all types of aircraft.

ATTENTION ARMY AVIATORS

NOW AVAILABLE TO FLYERS UNDER 31, E-4 UP, WITH 1,000 HOURS FLIGHT TIME

\$103,000 TOTAL **\$17⁹⁰**
COVERAGE **A MONTH**

(\$83,000 DECREASING TERM LIFE, PLUS \$20,000 AD&D)

Military Flyers through age 35* may request enrollment for \$35,000 group term life insurance, plus \$10,000 accidental death coverage, for \$12 a month. Now, flyers E-4 up requesting enrollment or enrolled in Plan F-3, with 1,000 or more hours military flight time, may also request enrollment for special "Add-On" coverage at NON-FLYER RATES as shown below.

*NOTE: Flyers age 36 and over are considered as non-flyers. See non-flyers insurance table below.

FLYERS UNDER 31

Plan	Term Life Insurance	Plus Accidental Death Coverage	Combined Total	Monthly Premium
F-3	\$35,000	\$10,000	\$ 45,000	\$12.00
Add-On	48,000	10,000	58,000	5.90
	\$83,000	\$20,000	\$103,000	\$17.90

FLYERS 31-35

Plan	Term Life Insurance	Plus Accidental Death Coverage	Combined Total	Monthly Premium
F-3	\$35,000	\$10,000	\$ 45,000	\$12.00
Add-On	39,000	10,000	49,000	6.75
	\$74,000	\$20,000	\$ 94,000	\$18.75

FLYERS 36 & OVER/NON-FLYERS

Age	Term Life Insurance	Plus Accidental Death Coverage no added cost	Combined Total	Total Cost Per Month
Under 31	\$80,000	\$10,000	\$90,000	\$ 9.90
31-35	65,000	10,000	75,000	11.25
36-40	50,000	10,000	60,000	11.25
41-45	37,500	10,000	47,500	16.25
46-55	27,500	10,000	37,500	16.25
56-65	20,000	10,000	30,000	23.25
66-70	10,000	—	10,000	23.25
71 & Over	3,000	—	3,000	23.25

Amounts of insurance and premiums change automatically on 1 June next, following your entrance into a new age group.

NOTE: Requests for Enrollment or increased coverage from Retired or Reservists cannot be accepted when submitted from Florida, Ohio, Texas, Wisconsin or outside the U. S. Once insurance is in force, moving to an ineligible location will not affect validity.

DIVIDENDS — Not guaranteed, but paid each of past 14 years. Current dividend 25% of term life premium.

COVERAGE underwritten by The Mutual Benefit Life Insurance Company, Newark, New Jersey, nation's fourth oldest life insurance company, on Master Group Policy Form TG (c) 611. This Master Policy is continued with the insurance company at the option of USBA.

ELIGIBLE TO REQUEST ENROLLMENT — Active duty to age 65; Reserve (including senior ROTC) and National Guard, 55 and under; and Retired, 55 and under. No physical exam usually required. Approval of insurance is based on satisfactory health information submitted.

SUICIDE — Not covered first year. This exclusion also applies to the amount of any later increase in coverage.

LOAD CARRYING

More than 7,000 pound external load.

MANEUVERABILITY

90° bank at mission gross weight.

LOW VIBRATION

At 1.0g vibration, an altimeter looks like this.

0.4g vibration looks like this.

0.08g in Sikorsky's UTTAS.
1976 technology produces vibration levels of 0.08g, increasing reliability.

Judge for yourself...

In Sikorsky's UTTAS, advanced technology is working today. And will keep on working far into the future.

Sikorsky's UTTAS doesn't simply promise technology that will work tomorrow. It's demonstrated technology that works today.

Lower vibration.

Technology that's provided Sikorsky's UTTAS with only 0.08g vibration levels — lowest we've ever produced.

Lifting capacity.

Technology that's given Sikorsky's UTTAS the capability to lift more than a 7,000 lb. external load.

Most maneuverable.

Technology that's made Sikorsky's UTTAS our most maneuverable helicopter in the skies today.

Increases MTBF.

It's technology that, in the final analysis, increases mean time between failure and reduces life cycle costs.

And that's the kind of technology that pays off. Today. Tomorrow. And far into the future. Sikorsky Aircraft, Stratford, Conn. 06602.

Sikorsky's UTTAS.
It's a fact, not a promise.

HIGH PRECISION SPACE POSITION INFORMATION FROM ONE STATION

High accuracy space position data in real time, at real savings, is the real story of the best single-station automated tracking system. It cuts both data costs and data turn around time. You can record, display, and review data while the test is in progress.

A field proven system.

It took years of laser systems engineering to perfect the GTE Sylvania Precision Automated Tracking System (PATS). And the system has been proved by an additional five years' use in the field. Systems are in use, or being developed for most of the major Department of Defense test ranges, NASA, and FAA.

We're helping you make it.

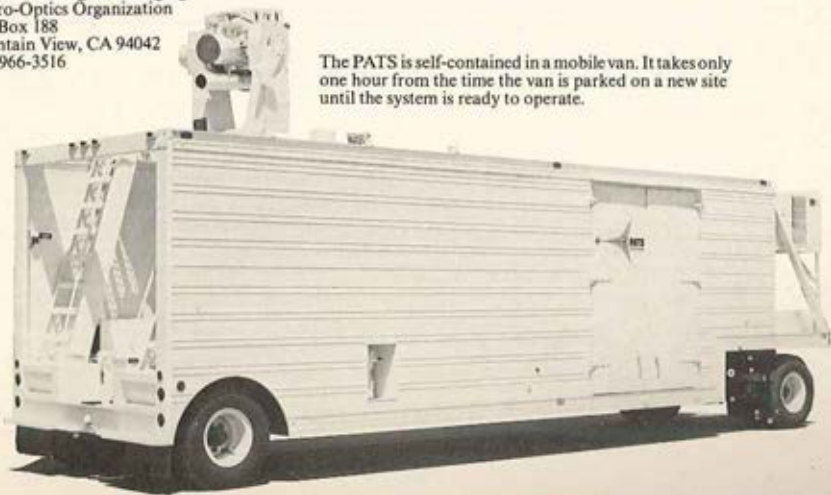

GTE SYLVANIA

Marketing Manager
Optical Tracking and Ranging
Electro-Optics Organization
P.O. Box 188
Mountain View, CA 94042
(415) 966-3516

Pictured at the PATS console is the single operator needed to measure range, azimuth, and elevation of airborne test vehicles with cost-efficient accuracy.

The PATS is self-contained in a mobile van. It takes only one hour from the time the van is parked on a new site until the system is ready to operate.

SPECO/KELSEY-HAYES PUTS THE ACCESSORY DRIVE IN THE YAH-63

The accessory gearbox on board Bell's YAH-63 provides power transmission for many of the auxiliary systems. It is capable of being supplied power from either the main transmission or from the auxiliary power unit for operation of systems during ground checkout without rotors turning. And, the accessory gearbox lubrication system is self-contained with no external oil lines, fittings or connectors. And, an oil cooler is not required.

***Removal of component does not require disassembly or removal of the gun from the turret.**

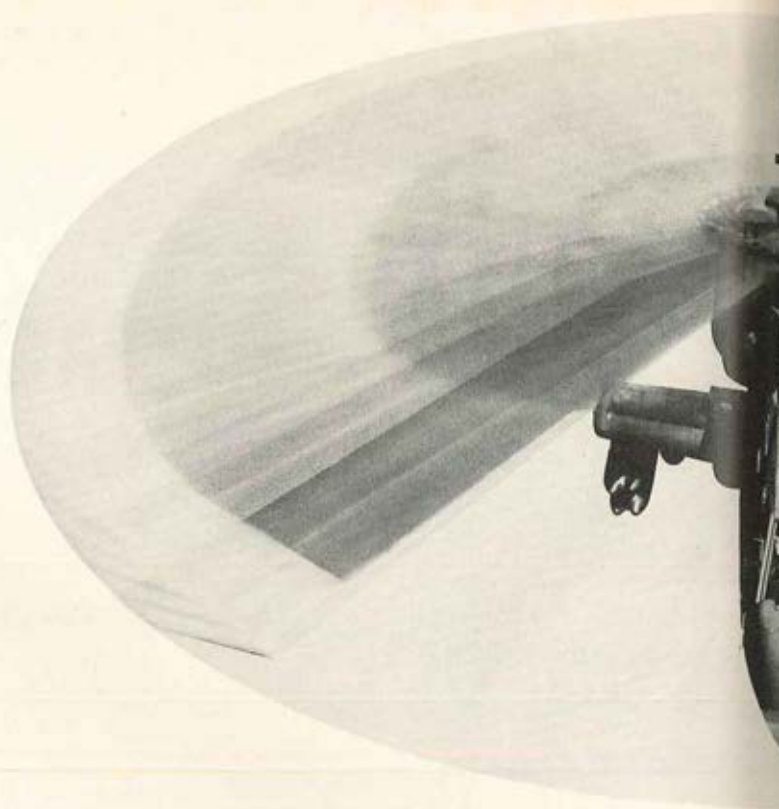

This complete maintenance schedule shows another reason why GE's 30mm AAH Gatling (XM-188 modified to fire DEFA ammunition) is the logical choice for the AAH mission. Not only are there long life cycles for each component and few replacements, the majority of maintenance can be done without disassembling the gun or removing it

from the AAH turret. The 30mm AAH Gatling for the Bell YAH-63.

For more information write: General Electric Company, Armament Systems Department, Lakeside Avenue, Burlington, Vermont 05401.

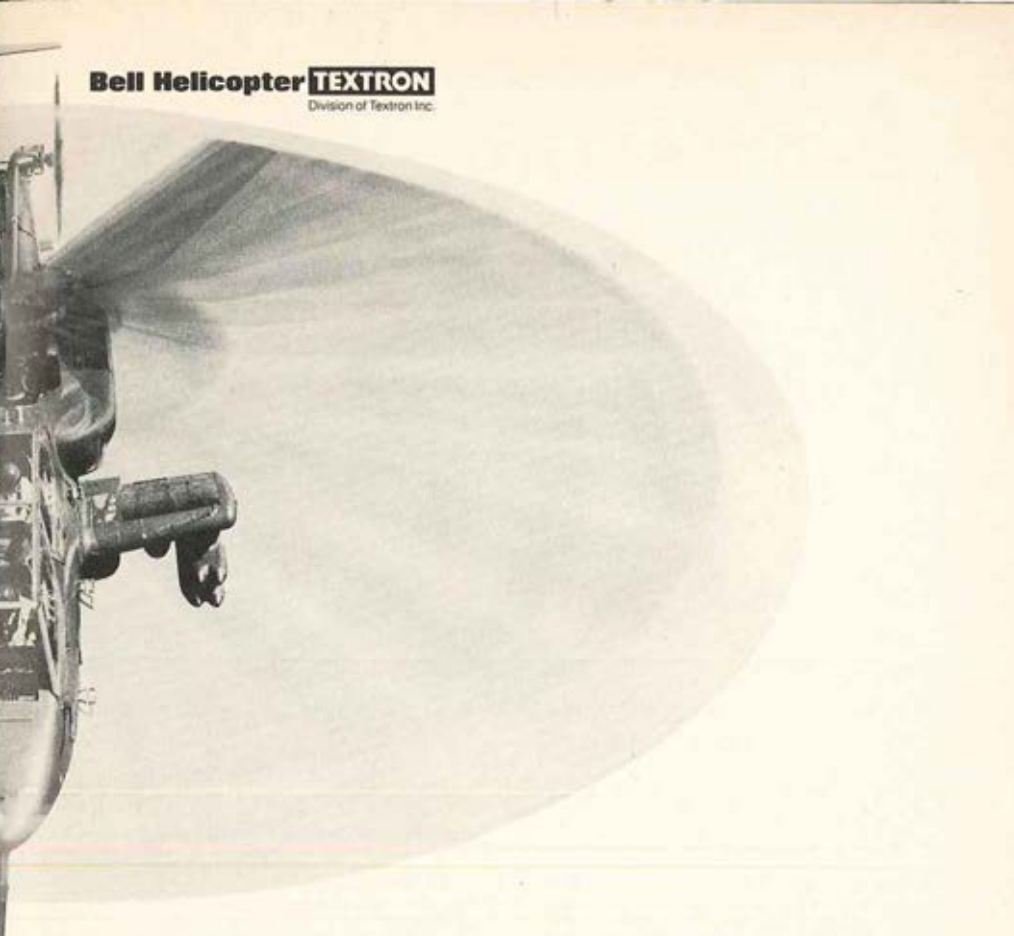

AIRCRAFT EQUIPMENT DIVISION

GENERAL  ELECTRIC

**When the
target's coming up,
depend on Bell
to put the pilot in
complete control.**

Bell Helicopter **TEXTRON**

Division of Textron Inc.

In the YAH-63, Bell put the pilot up front where he has to be for unobstructed visibility on NOE missions, and for close-in support when the battle gets hot.

The Bell YAH-63 displayed excellent maneuver control and stability in flight tests, and proved, in structural demonstration, its ability to handle high positive and negative G's. And Bell's exclusive nodal beam suspension gives a smoother ride, resulting in less crew fatigue and increased component life.

But getting there is only part of

the mission. Bell's experience provides a balanced integrated system, with alternate methods for engaging the target. And a cannon turret forward of the sight to protect it from muzzle blast.

Bell's survivability testing proves the YAH-63's ability to take a hit, keep on fighting, then bring men and machine home to fight again.

The Army must be able to depend on its Advanced Attack Helicopter to be available whenever it's needed. The Army can depend on Bell.

Bell Helicopter. The company with gunship experience.

A Rare Inside Story!

Gunship specialists at Bell Helicopter know the meaning of the phrase "survival of the fittest." Fit on the outside, fit on the inside. They recognize that an *advanced* attack

helicopter like the YAH-63 needs *advanced* interior subsystems that can meet a tough mission profile. Case Point: Instead of a conventional wiring system - heavy, vulnerable, inflexible, tough to maintain - Bell specialists use an advanced lightweight **Multiplex Data Bus Subsystem (MDBS)**. This is the most extensive application of electrical multiplexing to mission-critical command and status functions. *What's in it for the Army?* A gunship that is significantly lighter, which means more room for fuel, ammo, and backup electronics.

Far less vulnerable, since the MDBS redundant design keeps the 800 inputs and outputs working even after a hit. *Flexible, maintainable*, because MDBS is a programmable system, easily accessible, and can be modified, reconfigured, and expanded through software changes. The *proven* MDBS, from Harris Corporation, the company with airborne information handling experience, and Bell Helicopter, the company with **gunship experience**.

Bell's YAH-63 ...geared for landing by Ozone

Ozone Industries is proud of its association with Bell as the supplier of landing gear systems.

As one of the largest manufacturers of helicopter landing gears in the U.S., Ozone is respected for its design, development and production capabilities, and

for consistent on-time deliveries.

If you'd like more information on Ozone Industries and its products...which include steering systems and a variety of hydraulic power, control and storage devices, write for a copy of our new brochure.

Lord Kinematics helped Sikorsky turn promise into fact.

Sikorsky has combined maximum reliability and minimum maintenance into their UTTAS. They've done it with the latest technology. That's why they depend on Lord Kinematics for Lastoflex Bearings for the main rotor bearings.

Lord Kinematics' technical experience, design and manufacturing capabilities helped make the Sikorsky UTTAS Elastomeric Rotor Head require minimum maintenance and provide maximum reliability. When the unique demands of the main rotor spherical and thrust bearings for Sikorsky's UTTAS were presented, Lord actually advanced the state of the art in order to meet them. The thrust bearings shown below were both designed and built according to detailed specifications. The bearing on the right was not as tough as Lord and Sikorsky wanted for UTTAS. Its condition is shown

after 19,000 test cycles.

Lord's Response... Triple Life

The bearing on the left is a modification of the original design, using new design techniques. Its condition is shown after 60,000 test cycles.

This capability is available to you. For your elastomeric bearing requirements, contact Lord Kinematics, Lord Corp., Erie, Pa. 16512, (814) 456-8511.

We have Lastoflex® bearings to suit your needs, or we'll do our best to extend product capability for you.

That's a promise.

LORD Lord Kinematics

SCIENCE/SCOPE

More than 20 countries have selected TOW, US Army's tube-launched, optically tracked, wire-guided missile, as their infantry heavy assault antitank weapon. Exceptional quality control, shown in test firings from 171 lots and governed by the Army's rigid "fly before buy" program, has resulted in 100% acceptance. Missile reliability in all firings, foreign and domestic, is over 97%. Hughes/Tucson has produced more than 140,000 TOWs to date.

TOWs fired from US Army AH1Q Cobra helicopters have been equally reliable. TOW is being considered by many other countries for use in airborne roles in a variety of helicopters, including the Hughes Helicopter 500MD, Aerospatiale Gazelle, Westlund Lynx, MBB B0105, and Agusta A109.

An extended-range version of the TOW missile, accurate to 3750 meters, is now available for helicopter launching systems. Additional range of 750 meters was achieved after Hughes engineers devised a means of increasing the length of the guidance wires on the missiles' existing spool without need for any missile design changes. The hair-thin wires, through which the missile receives its steering signals, unreel from the spool during flight. The longer range gives helicopter crews greater standoff capability.

Full-range test firing of TOW over water has been successfully completed in a joint US-Italian army effort. This gives TOW an additional capability as a defense weapon against invasion by small coastal craft, and has aroused considerable interest in several countries.

AIDATS

Real-time transmission of aerial reconnaissance radar imagery to military commanders on the ground. AIDATS (Army In-flight Data Transmission System) imagery is reconstituted on ground with resolution as high as airborne cockpit display. (Long Beach Harbor, California, shown here.)

System provides immediate assessment of changing conditions in order to revise or update tactics. Eliminates delays of returning aircraft and affords opportunity to conduct additional passes of areas of escalating activity.

AIDATS being developed by Northrop for U.S. Army Electronics Command. Program proceeding on time, on cost, performance surpassing specifications.

This modular system is adaptable to other data link needs.

Aircraft, Electronics, Communications, Construction, Services. Northrop Corporation, 1800 Century Park East, Los Angeles, California 90067, U.S.A.

ARMY AVIATION ASSOCIATION

1 Crestwood Road, Westport, Conn. 06880

I wish to join the Army Aviation Ass'n of America [AAAA]. My past or current duties affiliate me with U.S. Army Aviation and I wish to further the aims and the purposes of AAAA. I understand that the annual membership includes a subscription to the AAAA-endorsed magazine, ARMY AVIATION, and that my membership starts on the subsequent 1st of the month.

Note: A home address is suggested, if one's military or firm address exceeds 25 characters.

Located in the Army Aviation Museum at Ft. Rucker, the AAAA-sponsored "Hall of Fame" was initiated in 1974. Elected to membership by vote of the Association's 10,000-plus members, the Inductees have their portraits and citations displayed in a separate "hall" in the Museum. Candidates were elected on the basis of their accomplishments during specific periods of time.

- *****
The AAAA scholarships issued through the AAAA Scholarship Foundation are awarded annually on the basis of both merit and/or need. Some 80 persons complete annually.

THE AAAA SCHOLARSHIP FOUNDATION: BACKGROUND, PURPOSES, GOVERNORS

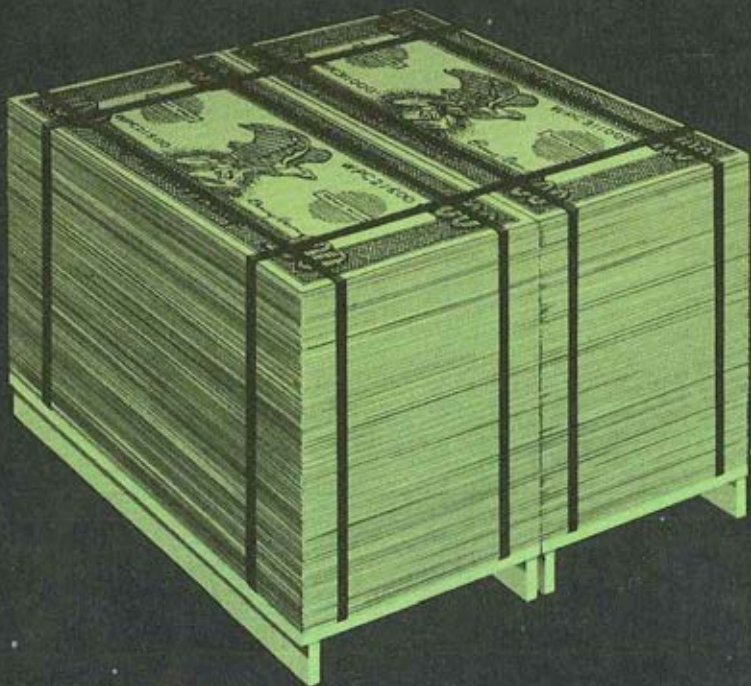

MG Beatty

Incorporated December 5, 1963 under the laws of the State of Connecticut as a non-profit charitable activity, the AAAA Scholarship Foundation's purposes are to render financial aid for the college-level education of the children of AAAA members or deceased members, and to conduct fund-raising activities to support this purpose. Donations, bequests, legacies, devises, or gifts to the Foundation are deductible for Federal estate and gift tax purposes. Since 1963, some 181 recipients have received \$52,900 in direct aid. A 10-member Board (Bryce Wilson, President; G.P. Seneff, Jr., D.L. Bristol, A.H. Kesten, G.S. Beatty, Jr., J.L. Klingenhagen, R.M. Leich, D.F. Luce, J.W. Marr, and N.A. Mahone, Jr.) administers the program, and reports to the AAAA through its President.

MG Klingenhagen

\$1.3 million.

Initiated in 1957, the AAAA-endorsed Flight Pay Protection Plan exceeded \$1.3 million in flight pay claims in July of this year. More than 867 Army Aviation flight personnel in the active Army and Reserve Components have shared in the \$1.3 million in claims during the program's nineteen year duration.

AAAA'S NATIONAL MEMBERS-AT-LARGE, MEMBERSHIP TOTALS & GOVERNMENT

1975-1976 NATIONAL MEMBERS-AT-LARGE; TERM OF OFFICE AND COMMITTEE ASSIGNMENTS

With the concurrence of the National Board, National Members-at-Large are appointed by the President for a one-year term, and serve as the Chairmen of many of the Association's Standing Committees. Limited by By-Law to nine in number, the 1975-1976 National Members-at-Large, their Committee chairmanships, and the pages on which their photos appear are as follows:

- Major General James M. Lee, Congressional Liaison [Photo, page 8].
- Brigadier General Joseph H. Kastner, Military Affairs, page 29.
- Colonel Rudolph D. Descoteau, Hall of Fame, page 10.
- Colonel Charles R. Jones, Army National Guard Affairs, page 35.
- Lieutenant Colonel Richard R. Noack, USAR Affairs, page 35.
- Major Eugene L. Richardson, page 35.
- First Sergeant Malcolm E. Leighton, Enlisted Affairs, page 8.
- Paul L. Hendrickson, DAC Affairs, page 10.
- Eugene J. Tallia, Industry Affairs, page 8.

As a point of information, 24 of the 68 AAAA members who have been appointed to serve as Members-at-Large on AAAA's National Executive Board were later elected to three-year [elective] terms on the same Executive Board.

GOVERNMENT

The leadership and control of the AAAA rests with the officers of its 54 Chapter, four Regional, and single National Executive Boards. Establishing broad policy and implementing Ass'n-wide programs, the 51-member Nat'l Executive Board [personnel, page 6] meets 3-4 times a year. Its membership includes military, DAC, industry, and civilian representation, and covers all categories and ranks and grades of membership.

Chaired by National Board members, the thirteen major AAAA standing committees bring add'l members into the governing process. Composed of

MEMBERSHIP TOTALS AS AT MARCH 31, 1976
